

# SENSHOME - Sensing Special Needs

## WHAT

SENSHOME develops new smart home design and technologies for houses “as normal as possible” to be inhabited autonomously by people with disabilities, especially for autistic people

## HOW

- Implementation of smart sensor networks
- Recognition of hazardous events
- Monitoring and regulation of room conditions (comfort and well-being)
- Development of a new design concept for independent living

## WHY

Enable a self-determined and independent life and ensure a high level of privacy to disable people
